

# Veberod Gem Gallery

## Reticulated Silver

Reticulation is a process of creating texture in metal using heat. We will be learning to depletion gild silver and working with reticulation silver, which is a different alloy than either sterling or fine silver. We will not be making anything with the silver, just learning the technique – however we will discuss several options for what to do with your silver once it's been reticulated.

Please plan to provide all your own consumables, including solder, flux and torch fuel. You will be able to purchase anything you need at Veberod Gem Gallery during class. Being able to see clearly is essential to your success, so bring any portable lighting and magnification you are accustomed to using (cheaters, OptiVisor, Telesight).

Prerequisite: Silversmithing II

### Supplies Required

Reticulation silver  
Torch Fuel

### Tools used

Torch

### Notes on tools/supplies

This list is designed to help you determine what to bring from home. Not everything is required, and we **STRONGLY** recommend not buying anything before class if you don't already have it. Many times there are factors that will determine your best choice and we will discuss all this at class. Bring what you have, and don't stress about what you don't.

We prefer not to offer kits for our classes. We try to encourage students to pick equipment and supplies (stones, beads etc.) based on their individual creativity. Often there are several options available and you may have some items already.

Please **mark** tools from home so they are identifiable as your own. If you have any questions regarding the cost of tools, supplies or anything else about the class, please contact us at 952.595.8338.
